I firmly believe that the fire is not an issue for us (having gleaned the scenario from reliable sources). The remaining building is a potential issue for someone, but not us. I think the drums issue is local legend. PCBs are unfortunately part of the local landscape, but I am pretty sure EPA assessed that. Some folks are hard to satisfy. The most important aspect is that you will likely have a much better time in Canada than you would in Pennsylvltucky.

Mike,

Please peruse the Email string I attached.

Although the initial PEMA report indicated that the involved building housed HazMat,s, follow up seemed to indicate that the building/area involved did NOT.

Kevin (below) McLemore is a DEP AQ Supervisor.

These kind of complaints/inquiries make me crazy. "The Twp. officials have not told them anything, or if

they need to evacuate as a precaution".

EXACTLY, "if" they told you to evacuate or shelter in place then there is reason to believe there is a problem. If your concerned, ask the local EMC!!!!

Anyway, hope this helps.

FYI, I'm off to Canada 6-11 to 6-19, so Tom is @ the Helm.....

Rex

Rex

Just to let you know I went out and observed the extent of the fire. It appeared to me that the fire was in one of the outlying buildings separate of the main structure. The roof had collapsed and it was still smoldering. Additionally, there were trucks and a storage area where products were stacked. However, there was no evidence of fire in that location. There was no apparent air quality violations.

Kevin

Kennett Square building goes up in flames

A lightning strike may be to blame for this massive Chester County fire

KENNETT SQUARE, Pa. - -- Fire investigators say a lightning strike may have sparked a blaze in Chester County.

Flames broke out at the NVF Manufacturing company on the 300 block of West Cedar Street in Kennett Square shortly after midnight Friday. Smoke and flames damaged the roof to the block long vacant building.

The fire went to 2 alarms before fire crews were able to bring it under control.

Tom and Rex - previously some citizens were expressing concerns to EPA about PCBs and (what I think unfounded) drums in a ballfield. Now the fire issue. EPA is connecting dots and I am wondering if a request for an assessment is forthcoming. Those ideas and requests always tumble downhill and I seem to never be able to climb out of the way. I will keep you posted. Do you know who is conducting any on-Site activities ? Rex, is there a person in the Department who has any responsibility for this property ?

Subject: Nvf site in Kennett square.

Hi there was a fire last night at the nvf site. My concern is what was held in that building because it is still smokeing and what maybe going in to the air. I live next to the site. The building that is burning is in the back. First building on the left comeing in threw the back gate.

I'm just concerend about the air quality because I have a small child

ED_006592A_00000042-00007

and in the neighbor hood there are many young children. I just don't want to see my daughter get sick months or years later because of the smoke. No one in the township has said anything to use about the fire or any concerns with air quality or if we need to evacuate as a precaution.
